EUROBAROMETER 94.2

Carried out by Kantar Public Brussels on request of the EUROPEAN COMMISSION, Directorate-General Communication (COMM.A.3.: Media monitoring and Eurobarometer) and the EUROPEAN PARLIAMENT, Directorate General Communication, between November 20 and December 21, 2020.

Archive pre-release, dataset version 1.0.0 as of July 7, 2021

This dataset edition has not yet passed the complete archive processing and documentation, such as complete variable documentation for online data browsing and analysis in ZACAT (<https://zocat.gesis.org>). Basic checks have been performed; technical variables, protocol variables and variable labels have been adapted to archive standards for the EUROBAROMETER series.

Please note that this Eurobarometer wave was collected during the 2020 Coronavirus pandemic. It therefore deviates from previous Eurobarometer waves in several aspects, including the mode of data collection, the presence resp. formulation of certain demographic and interview protocol variables, and the source materials delivered to GESIS. For further details on the mode of data collection please refer to the Technical Specifications in the basic bilingual questionnaire.

The variable names of the demographic items have been adjusted to the series standard.

Proposed citation

European Commission and European Parliament, Brussels: Eurobarometer 94.2, November-December 2020. Kantar Public, Brussels [Producer]; GESIS, Cologne [Publisher]: ZA7750, dataset version 1.0.0, doi:10.4232/1.13722

Survey instruments

For question wording, answer category text, interviewer instructions or question routing, please see the BASIC BILINGUAL QUESTIONNAIRE and the respective national field questionnaires. The basic questionnaire also includes a technical description of this EUROBAROMETER survey.

The national field questionnaires in the different language versions are available through the GESIS Eurobarometer web pages (STUDY PROFILES), the ZACAT online data catalogue, or the Eurobarometer study descriptions in the data holding

catalogue (DBK), as soon as all embargos have been lifted, if applicable.

Weighting information

In general, the Standard and Special Eurobarometer datasets provide for two types of weighting, a post-stratification weighting and a population size weighting.

For each sample (country or lower level region) through the **post-stratification weighting** procedure a comparison is carried out between the sample composition and a proper universe description. The universe description is made available by the National Survey Research Institutes and/or by EUROSTAT. On this basis a national weighting procedure, using marginal and intercellular weighting, is applied. As such in all countries, minimum sex, age, region NUTS II (basic regions as defined by the EUROSTAT nomenclature of territorial units for statistics), and size of locality are introduced in the iteration procedure. This post-stratification weighting is also referred to as redressment or non-response weighting. A design weight which would adjust for unequal selection probabilities (depending on the household size) is not made available.

The **population size weighting** factor corrects for the fact that most samples are of almost identical size, no matter how large or small the populations are from which they were drawn. These weights ensure that each country as well as each lower level sample (East and West Germany) are represented in proportion to its population size within different country/sample groupings, or according to the historical states of European unification (e.g. founder members, new members, Euro zone) in the case of the EUROPEAN WEIGHTS, or within the whole country in the case of Germany (WEIGHT SPECIAL GERMANY).

The **population size weights** all include the post-stratification weighting factors. The EUROPEAN WEIGHTS adjust each sample in proportion to its share in the total population aged 15 and over of the European Union (formerly European Community) or in accordance with its historical compositions. These adjustments are based on population figures published by EUROSTAT in the Regional Statistics Yearbook. Between Eurobarometer 33 and 54.1 adjustments to the predefined standard sample size is taken into account. In general, all samples which do not belong to the respective group of countries/samples under consideration are excluded from calculation.

The application of post-stratification weights is **recommended for descriptive (univariate) analysis**. Meaningful descriptive results for groups of countries or for countries with separate samples (Germany) require population size weighting. Official Eurobarometer reports are always based on weighted data.

The following weights are provided for Eurobarometer 94.2:

W1 (WEIGHT RESULT FROM TARGET) reproduces the real number of cases for each country. East and West German samples are weighted separately. This weight in its function corresponds to former NATION WEIGHT II (until EUROBAROMETER 31).

W3 (WEIGHT GERMANY) adjusts the East and the West German samples to their respective proportions in the united Germany. All other samples are excluded. This weight should be used whenever the united Germany is to be analysed as a whole.

W22 (WEIGHT EU27) includes all 25 member countries after the 2004 enlargement, and the new members as of 2007 Romania and Bulgaria.

W14 (WEIGHT EU25) refers to the EU member countries as of the 2004 enlargement; **W13** (WEIGHT EU NMS 10) to the group of the ten new members at times. In both cases all other samples are excluded from calculation.

W11 (WEIGHT EU15) refers to the EU members after the 1995 enlargement. All other samples are excluded from calculation; **W10** (WEIGHT EU NMS 3) separates the three new members at times.

W9 (WEIGHT EU12+) includes East Germany; **W7** (WEIGHT EU10) in addition excludes Spain and Portugal (enlargement 1986), and the latter two include East Germany; **W6** (WEIGHT EU9+) also excludes Greece (enlargement 1981), and the latter two include East Germany.

W5 (WEIGHT EU6) refers to the six EC founder members: France, Belgium, the Netherlands, West Germany, Italy, and Luxembourg and the latter two include East Germany. All other samples are excluded from calculation.

W23 (EU28) refers to the EU28 countries (EU27 plus Croatia; membership as of July 2013; UK not present in the dataset); **W94** (WEIGHT EU NMS 13) groups the 13 new member countries for the enlargement period 2004 to 2013.

W97 (WEIGHT EU CC BALKANS) separates the group of Balkan Candidate Countries Macedonia, Montenegro, Serbia and Albania. In each case all other samples are excluded from calculation.

W92 (WEIGHT TOTAL) refers to the total of all countries / samples as a whole, i.e. EU28 minus UK.

W85 (WEIGHT EURO ZONE 19 EU27B) adds LITHUANIA to the group of EURO zone countries as of January 2015. **W86** (WEIGHT NON-EURO ZONE 19 EU27B) references the EU27B countries which as of January 2020 did not introduce the common currency.

Remarks about this dataset version

- Question module QA “Parlemeter 2020” was implemented on behalf of and financed by the European Parliament. It partly replicates questions formerly asked in the framework of Eurobarometer 92.2 (ZA7580) Eurobarometer 91.5 (ZA7576), and Eurobarometer 88.1 (ZA6925).
- Question module QB “Social Issues” was newly introduced.
- Question module QC is currently under embargo.

- Starting with Eurobarometer 89.2 no separate sample is drawn for Northern Ireland, which is now covered by the sample for the United Kingdom. Accordingly, the formerly available weight variable w4 “WEIGHT UNITED KINGDOM” is obsolete and no longer included in the dataset.
- The names of several demographic variables have been changed to the Eurobarometer series standard.
- Due to a correction of some country group weights there are minor discrepancies with the published Excel volumes AA (groups of countries).
- 85 respondents state their nationality to be “Other” without mentioning any additional nationality in q1 (“NATIONALITY”). According to the questionnaire the interview should have been closed for these respondents.
- For variables qa13b (“MOST USED MEDIA LAST 7 DAYS 2ND”) the official Excel volumes and a crosstabulation of qa13a and qa13b both suggest that respondents answering “Don’t know” in qa13a have not been presented qa13b. However, the questionnaire does not contain such a filtering instruction (see the filtering instruction for qa14b). Qa13b was corrected by GESIS to reflect the suspected filtering. The positive responses are not affected by this adjustment.
- For d73 (“DIRECTION THINGS ARE GOING - ...”) the questionnaire includes an item about the respondents’ personal lives. This variable has not been made available, and it is not part of the official table volumes and the report.
- Data for protocol variables p2 (time of interview), p3 (duration of interview), p8 (postal code), p9 (sample point number), and p10 (interviewer number) have not been made available.
- The fieldwork dates implied by the values in protocol variable p1 (date of interview) differ slightly from those indicated in the technical specifications provided by Kantar for several countries.
- The variables summarizing household sizes (d40abc and d40_d11) have been corrected by GESIS.
- The number of persons present (p4) and respondent cooperation (p5) are available only for the CAPI interviews. This completely excludes the BE, CZ, EE, FI, GR, IE, LT, LU, and SI samples as well as a part of the DE, DK, LV, MT, SE, and SK samples.
- Checks for duplicate case identification numbers and cases have been performed: The case id variables appointed by Kantar are not unique. However, the dataset has been checked for duplicate cases on the base of 64 selected non-technical (substantial) variables without evidence for any duplicate.
