Technical Specifications

Between the 14th June and the 15th July 2021, Kantar on behalf of Kantar Belgium carried out the wave 95.3 of the Eurobarometer survey, on request of the European Commission, Directorate-General for Communication, "Media monitoring and Eurobarometer" Unit.

The wave 95.3 includes the Standard Eurobarometer 95 survey and covers the population of the nationalities of the European Union Member States, resident in each of the 27 Member States and aged 15 years and over.

Some questions were asked also in 12 other countries or territories: Albania, Bosnia and Herzegovina, the Turkish Cypriot Community in the part of the country that is not controlled by the government of the Republic of Cyprus, Iceland, Kosovo²⁰, Montenegro, North Macedonia, Norway, Serbia, Switzerland, Turkey and the United Kingdom.

In these countries and territories, the survey covers the national population of citizens and the population of citizens of all the European Union Member States that are residents in these countries and territories and have a sufficient command of the national languages to answer the questionnaire.

The basic sample design applied in all countries and territories is a multi-stage, random (probability) one. In each country, a number of sampling points was drawn with probability proportional to population size (for a total coverage of the country) and to population density.

In order to do so, the sampling points were drawn systematically from each of the "administrative regional units", after stratification by individual unit and type of area. They thus represent the whole territory of the countries surveyed according to the EUROSTAT NUTS II (or equivalent) and according to the distribution of the resident population of the respective nationalities in terms of metropolitan, urban and rural areas.

In each of the selected sampling points, a starting address was drawn, at random. Further addresses (every Nth address) were selected by standard "random route" procedures, from the initial address. In each household, the respondent was drawn, at random (following the "closest birthday rule"). If no one answered the interviewer in a household, or if the respondent selected was not available (not present or busy), the interviewer revisited the same household up to three additional times (four contact attempts in total). Interviewers never indicate that the survey is conducted on behalf of the European Commission beforehand; they may give this information once the survey is completed, upon request.

The recruitment phase was slightly different in the Netherlands. In these country, a sample of addresses within each areal sampling point (1 km² grid) were selected from the address or population register. The selection of addresses was done in a random manner.

Households were then contacted by telephone and recruited to take part in the survey.

²⁰ This designation is without prejudice to positions on status, and is in line with UNSCR 1244/99 and the ICJ Opinion on the Kosovo declaration of independence.

CAPI : Computer-Assisted Personal interviewing
CAWI : Computer-Assisted Web interviewing

Consequences of the coronavirus pandemic on fieldwork

■ Face-to-face interviewing

Where feasible, interviews were conducted face-to-face in people's homes or on their door step and in the appropriate national language. In all countries and territories where face-to-face interviewing was feasible CAPI (Computer Assisted Personal Interviewing) was used. For all interviews conducted face-to-face, hygiene and physical distancing measures have been respected at all times in line with government regulations, and whenever possible, interviews were conducted outside homes, on doorsteps, to remain in open air and maintain social distance.

■ Face-to-face and online interviewing

In Czechia, Denmark, Latvia, Luxembourg, Malta, the Netherlands, Slovakia and Slovenia face-to-face interviewing was feasible but it was not possible to reach the target number of face-to-face interviews within the fieldwork period due to the impact of Covid-19 restrictions: many potential respondents are reluctant to open their homes to interviewers, even if they respect hygiene rules and physical distancing, such as wearing masks and using hydroalcoholic gel. Therefore, to hit the target number of

interviews within the fieldwork period, **additional interviews** were conducted online with Computer-Assisted Web Interviewing (CAWI) technique.

■ Online interviewing

In Belgium, Estonia, Finland, Iceland, Ireland, Lithuania, Norway, Sweden, Switzerland and the UK face-to-face interviews were not feasible at all. Therefore all interviews were conducted online with CAWI technique.

Recruitment for online interviews

■ In the EU

The online design in each country differed based on what was feasible within the fieldwork period. Where feasible, the online sample was based on a probabilistic sample design. Those recruited to the online survey were recruited through a single mobile frame or dual frame Random Digit Dialling (RDD) design. In this way the entire phone owning population in each country had a non-zero chance of being sampled. The choice of whether to use a single mobile frame or dual frame (mobile and landline) was dependent on the countries' landline infrastructure. Where the landline infrastructure is suitably advanced to support a significant minority of residential households with landline phones a dual frame design is employed. The mix of mobile and landline sample is designed to maximise the representation of the responding sample. The RDD sample for both the mobile and landline sample is drawn from the country's telephone numbering plan. The landline sample frame is stratified by NUTS3 regions based on their prefix and the mobile by operator before a systematic random sample of numbers is generated proportional in size to the total generable numbers in each stratum. Respondents were recruited using this sample design in **Belgium, Czechia, Estonia, Ireland, Latvia, Lithuania, Luxembourg, Malta, Slovakia and Slovenia.**

In **Finland, Denmark, and Sweden**, RDD samples were not used, instead the telephone sample was drawn from the country telephone directory. In these three countries the telephone directories offer comprehensive coverage of the phone owning population, storing both landline and mobile phone numbers for each individual.

In **the Netherlands**, a proprietary panel called "Nipobase" was used, drawing a random sample from their panel. This panel uses a mix of probability based sampling to recruit panellists and non-probabilistic approaches to maximise representation where the probability based approach under-represents, such as in the younger age groups. Nipobase uses mix of offline and online modes. Offline modes are typically RDD samples and online modes are typically recruitment via targeted websites and social media platforms.

Standard Eurobarometer 95 Spring 2021

■ Outside the EU:

In **the UK**, recruitment of respondents was made either via a face-to-face CAPI mode of data collection based on a clustered multistage random sample of addresses or via a postal invite to an online survey using a completely unclustered random sample of addresses.

In **Norway** and **Iceland**, stratified random samples were drawn from among probability based samples. Recruitments are done using offline modes of data collection (telephone and postal) based on a probability sample design.

In **Switzerland** samples were randomly drawn from the non-probabilistic sample (“Demoscope”). Demoscope is a pseudo-probabilistic sample, in that the frame for selecting households is based on a probability sample. Recruitment is done via the telephone directory – which lists landline numbers only in Switzerland, where landline coverage is very high. However the selection of individuals in the households to join the panel is not random. Demoscope was used as the primary source.

Please note that when the response rates were not sufficiently large to achieve the target sample size in the fieldwork period, we had to further supplement the samples drawn probabilistically (either face-to-face or phone-to-web) with non-probabilistic panels. This was effectively a ‘last resort’ option when no other probabilistic design was feasible. In this regard, in **Lithuania**, the sample was supplemented with a randomly drawn sample from Norstat’s non-probabilistic sample panel.

Response rates

For each country a comparison between the responding sample and the universe (i.e. the overall population in the country) is carried out. Weights are used to match the responding sample to the universe on gender by age, region and degree of urbanisation. For European estimates (i.e. EU average), an adjustment is made to the individual country weights, weighting them up or down to reflect their 15+ population as a proportion of the EU 15+ population.

The response rates are calculated by dividing the total number of complete interviews with the number of all the addresses visited, apart from ones that are not eligible but including those where eligibility is unknown. For Standard Eurobarometer 95, the response rates for the EU27 countries, calculated by Kantar, are:

BE**	22,4%	LU*	19,4%
BG*	47,1%	LU**	55,6%
CZ*	43,6%	HU*	61,5%
CZ**	34,3%	MT*	82,2%

** CAWI : Computer-Assisted Web interviewing (CAWI
RRs do not include the recruitment phase)

Standard Eurobarometer 95 Spring 2021

Margins of error

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With samples of about 1,000 interviews, the real percentages vary within the following confidence limits:
